

*Hip, hip, hurra! Kunstnerfest på Skagen (1886) by P.S. Krøyer (Gothenburg Museum of Art, public domain)*

## Organization

- Jan Bosch, Chalmers University of Technology, Sweden
- Brian Fitzgerald, University of Limerick, Ireland
- Michael Goedicke, University of Duisburg-Essen, Germany
- Helena Holmström Olsson, Malmö University, Sweden
- Marco Konersmann, University of Duisburg-Essen, Germany
- Stephan Krusche, Technical University Munich, Germany

## Program Committee (tentative)

- Karen Smiley, ABB Corporate Research
- Markus Seitz, Nokia
- Wolfgang Gehring, Daimler TSS
- Steve Versteeg, CA Technologies
- Tommi Mikkonen, University of Helsinki
- Casper Lassenius, Aalto University
- Juergen Muench, Reutlingen University & University of Helsinki
- Stefan Wagner, University of Stuttgart
- Klaas Stol, Lero
- Laurie Williams, North Carolina State University
- Robert Hall, AT&T Labs Research
- Rafael Prikladnicki, PUCRS

## Important Dates

- **Abstract Submission:** Jan 30, 2018
- **Paper Submission:** Feb 05, 2018
- Notification: Mar 05, 2017
- Camera ready: Mar 15, 2018
- Workshop: May 28, 2018  
(tentative)

In cooperation with the DFG priority program 1593 “Design for Future – Managed Software Evolution”

Design For  
**FUTURE**

## Aims and Scope

Today, software development is conducted in increasingly turbulent business environments. Typically, fast-changing and unpredictable markets, complex and changing customer requirements, pressures of shorter time-to-market, and rapidly advancing information technologies are characteristics found in most software development projects. To address this situation, agile practices advocate flexibility, efficiency and speed. While many software development companies have indeed succeeded in adopting agile practices in parts of their organisation, the focus for many organisations is predominantly at the team level. The other functions in the organisation, including customer relations, product management, R&D management and software release, in many companies still work in traditional slow cycles, measured in months and years.

Continuous software engineering refers to the organisational capability to develop, release and learn from software in rapid parallel cycles, typically hours, days or very small numbers of weeks. This includes determining new functionality to build, prioritising the most important functionality, evolving and refactoring the architecture, developing the functionality, validating it, releasing it to customers and collecting experimental feedback from the customers to inform the next cycle of development.

Reaching this goal requires crosscutting research which spans from the area of process and organisational aspects in software engineering to the individual phases of the software engineering lifecycle and finally to live experimentation to evaluate different system alternatives by users feedback. Consequently, the workshop aims to bring the research communities of the aforementioned areas together to exchange challenges, ideas, and solutions to bring software engineering a step further to being a holistic continuous process.

RCoSE 2018 is co-located with ICSE 2018, the International Conference on Software Engineering (see <https://www.icse2018.org>), in Gothenburg, Sweden. RCoSE will be a highly interactive workshop with a strong emphasis on discussions.

## Topics of Interest

As a summary, topics relevant to the scope of the workshop include rapid continuous software engineering as described above and specifically the following:

- Agile practices
- Relations between agile practices and the specific development phases, e.g., requirements engineering, architectural design, programming languages, validation and verification
- Organizational aspects of agile processes
- Tools supporting continuous software engineering
- Application / system monitoring
- Live and automatic experimentation and quick feedback of experimental results
- Usability / human computer interaction
- Software evolution
- Software maintenance

## Paper Submission Details

We are soliciting full research papers (up to 7 pages), position papers (up to 4 pages), and industrial abstracts (1 page). Full research papers present original and evaluated research, position papers describe novel ideas, identified challenges, or experiences related to the workshop's theme, and industrial abstracts report from challenges and success stories from practice. The paper has to follow ICSE 2018 formatting and submission instructions.

<https://www.icse2018.org>  
(see “ICSE 2018 Formatting Rules”)

Please submit your abstract and paper using **EasyChair**:

<https://www.easychair.org/conferences/?conf=rcose2018>
